About

Crafting interfaces. Building polished software and web experiences. Experimenting with design and user interfaces. *Webarchitect* at Selehann.

Experience

March, 2022 - now

Front End Developer   at Selehann

Currently working on two big and exciting project: a CMS and a new product born in-house!

Here are some of the most interesting things about the work:
• We are currently more than 100 people, so working in an agile environment is a must, that's why we are using tools such as Jira, Trello and Confluence.
• Re-think of the company's website. This includes both designing - using Figma - and coding!
• Writing documentation in Confluence is part of my day-to-day work.
• My team is in charge of user authentication, so dealing with Auth0 stuff is my daily basis
• I've learned how to deal with sudden changes in direction since I've been part of a new product since the very beginning!
• Have worked with modern front end technologies such as React, Next, Typescript, Bootstrap, pre-processors (Sass), post-processors (PostCSS) and/or Redux!

May, 2021 - March 2022

Full Stack Freelance

- I did some websites for local companies. This includes prototyping, designing and coding both the back-end and front-end.

Skills

- Front end: React   Next   Redux   Typescript   React Native   Apollo
